Reimagine Learning with Device Management for your Interactive Screens

Overview

Manage and secure all your IFP (Interactive Front Panel Screens) from anywhere in the world and running on any Operating Systems (OS). Remotely control your screens and perform multiple actions such as troubleshooting, pushing content, remote wipe off. Keep your devices and your institute's productivity running at its max.

Benefits

• Perform remote actions like reboot, restart, data wipe all within a flash

• Push relevant apps and content in bulk

• Get a bird's eye view of your your data and application usage

• Prevent loss or theft by creating virtual boundaries of your educational premise

• Keep your data safe by setting extensive security configurations

Introduction

Smart boards are more than just a display, they are a revolutionizing tool that facilitates interactive learning environments. With Interactive Flat Panels standing at the forefront of this transformation, it is important to ensure seamless operations, security and optimal utilization of these devices.

MDM provides a centralized platform that empowers the IT admins to oversee, configure, and maintain Interactive Flat Panels across multiple classrooms or school premises. From a single interface, administrators can remotely manage software updates, troubleshoot issues, and ensure that all devices are operating optimally, saving precious time and resources for educators.

Let's dive deeper into the various benefits it brings for the educational institutions:

Centralized Dashboard

Managing a fleet of Interactive Flat Panels across multiple classrooms or locations can be a daunting task without a centralized management system. Scalefusion MDM provides a centralized dashboard that allows administrators to efficiently view and control all devices and ensure state, division, district & block level management of them. IT admins can get a holistic view of their flat panels and get insights and reports into information such as device usage, application usage, power on or off and many more.

Task Scheduling with Workflows

Administrators can schedule recurring tasks to perform sanity checks on the device inventory and save IT efforts. Using Scalefusion Workflows, IT admins can schedule a profile switch, periodic lock/unlock and OS or App updates. Furthermore, IT admins can schedule compliance checks and alerts for violations, security policy breaches and data usage.

Device Groups

Grouping functionalities within MDM for Interactive Flat Panels makes the device management process seamless and efficient. IT admins can group devices based on zones , blocks or districts, classes or courses and configure different policies in different groups. For instance, devices in different zones or districts might require distinct security protocols, access controls, or software configurations. With grouping, these policies can be efficiently managed and applied without affecting devices in other groups.

Application & Content Management

Scalefusion MDM saves you the hassle of repetitive manual installation work by offering a centralized dashboard to remotely install, configure and manage applications and push content to all devices at once, ensuring that relevant educational content is readily available for teaching purposes.

Advanced Reports

Managing a large device inventory without seeking the aid of trends and analytics is old-school. Scalefusion MDM allows you to navigate a large device inventory with the help of reports available at a click. Pull reports for device details, outline device performance and usage and predict device downtimes before they happen. Generate exhaustive reports for account activity (audit logs), sort reports for each activity and user and get the exact date and time at which the activity was performed.

Remote Troubleshooting

Using remote troubleshooting capabilities, IT teams can identify and diagnose technical issues without physically being present in the classroom. With Scalefusion MDM, admins can take the remote access of the devices and troubleshoot , making the teaching experience glitch free.

Secure, Productive Interactive Flat Panels with Scalefusion MDM

As education embraces digital transformation, MDM for Interactive Flat Panels represents the future of classroom technology. Its role extends beyond mere device management; it's about creating a secure and productive learning environment. As educational institutes continue to embrace technology, investing in a robust MDM solution will undoubtedly pave the way for a more connected classroom experience.
