

**Empowering security, enabling innovation.**

# Targeted security at velocity

Reimagine endpoint security and embrace an additional layer of security in your organization. Protect your data with secure web gateway, VPN tunneling, I/O device access control and application control. Safeguard your critical assets while fostering innovation and agility with Veltar to strengthen your UEM and IAM initiatives.

# The broken security landscape

## Disappearing boundaries

- Hybrid or remote workforce not bounded by location
- Increasing number of devices and users that access sensitive data

## Increased complexity

- Lack of a single platform to manage and secure all devices
- Lack of cohesion leading to security oversights and vulnerabilities

## Curious case of compliance

- Inconsistent compliance standards across regions
- Frequent regulatory updates demanding constant adjustments

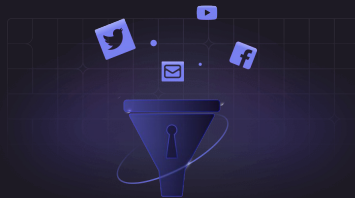

**Veltar**

## Secure data at rest and in motion

Note: \* indicates feature is coming Soon

### Secure Web Gateway

- Block domain and website based on categories to foster a secure digital experience
- Allow or block specific URLs to protect your network from malicious websites, phishing attacks and ensure strong compliance
- Block websites based on specific or group of words\*

### VPN Tunnel

- Embrace a Zero Trust Network Access (ZTNA)
- Route and encrypt web traffic through a VPN tunnel to ensure data protection and secure data transmission
- Secure and automate access to your on-prem resources on managed devices

# What Veltar does for your macOS devices

## I/O Device Access Control

- Protect your device data from unauthorized storage devices and peripherals\*
- Enforce compliance and granular encryption for every connection with specific read and write policies
- Control access to your ports by specific timeframes and networks

## Application Control

- Protect your macOS devices by blocking or allowing only specific applications
- Configure access restrictions by IP addresses, day and time schedule
- Enhance your security by blocking insecure app versions

# Why Veltar?

## Standard policies

- Apply policies uniformly to all endpoints, preventing gaps in mixed device environments
- Maintain a secure, perimeter-free network

## Dynamic policies

- Adapt policies in real-time based on each device's current state, network location or users
- Implement real-time access controls adjusted based on user behavior and risk levels

## Contextual compliance

- Ensure sensitive data access aligns with regulatory requirements across different regions
- Regularly audit access logs to detect anomalies

# What's in it for you?

## Unified solution

- Manage and secure devices and endpoints across ownership, make and model diversity
- Manage and secure user identities
- Manage zero trust and data loss prevention (DLP) policies

## Premium support

- 24\*6 chat-based customer support as a part of solution offering
- Product trainings and pre and post migration assistance
- Dedicated technical account manager

## Single pane of glass

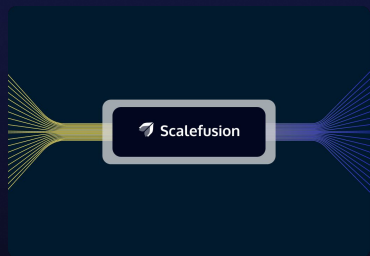

- Multi-OS management
- Readily available compliance reports
- Straightforward setup, clutter-free dashboard with short learning curve

# ISV/Software tool integrations

# The Next Era

One enterprise platform to manage endpoints, zero trust network access, and endpoint security.

# We help businesses

10,000+ businesses across the globe have expedited productivity, revenue & security using Scalefusion solutions.

## Positioned in the Midmarket Context: Magic Quadrant for Unified Endpoint Management by Gartner
